 What are your suggestions for the use of novel oral anticoagulation (NOAC) for this patient?  
*Özge Çetinarslan*
- 15.24-15.33** 33-year-old female with both history of uveitis and abortion. MTHFR homozygous mutation is detected in the study of intrauterine growth retardation and preeclampsia (PE) in the second pregnancy. The patient is having the third pregnancy with IVF and she is on 24th week of gestation. The growth retardation is connected to hypertension. Patient using fondaparinux is referred to us for antihypertensive treatment. Daily average ambulatory blood pressure is 130/70 mmHg. What are your suggestions?  
*Bengisu Keskin*
- 15.33-15.42** A 35-year-old woman was referred to the neurology outpatient clinic for headache and speech disorders 1 year ago. She underwent diffuse MR examination and was diagnosed with acute ischemic infarction and started with warfarin. TTE and TEE performed for etiologic investigation and PFO was detected. What is your suggestion about your patient's treatment plan and PFO closure?  
*Ali Doğan*
- 15.42-15.51** 57-year-old female patient was admitted to emergency room due to chest pain of 2 days. In the cardiac marker follow-ups in emergency room, it was observed that the levels were high and there were deep negative T and U waves in the ECG. EF was 45%, apex and its adjacent structures were hypokinetic and aneurysmatic. Coronary angiography with ACS diagnosis showed normal coronary arteries. What is the most likely diagnosis in this patient? What should be the follow-up and treatment approach after this stage?

Pulmonary thromboembolism (PTE) is diagnosed by V / P scintigraphy. Echocardiography detected a thrombus measuring 2.5 \* 1.5 cm in size in the right atrium. Right ventricular dilatation is not observed and pulmonary artery pressure is not high. It is known that the patient had a temporary catheter 1 week ago and was subsequently removed. How should the patient be treated in terms of thrombus?
